

Claims

1. A process for the distillation of vinylaromatic monomers in
5 the presence of 4-tert-butylcatechol (TBC) and oxygen, where-
in no aromatic nitro or amino compound is present in any ef-
fective amount.
2. A process as defined in claim 1, wherein the vinylaromatic
10 monomer used is styrene.
3. A process as defined in claim 1 or claim 2, wherein 4-tert-
butylcatechol is fed to the distillation apparatus concur-
rently with the vinylaromatic monomer, the concentration of
15 4-tert-butylcatechol in the distillation bottoms being in the
range of from 200 to 15,000 ppm based on the vinylaromatic
monomer.
4. A process as defined in any of claims 1 to 3, wherein the
20 vacuum distillation is carried out at temperatures ranging
from 40° to 125°C.
5. A process as defined in any of claims 1 to 4, wherein an oxy-
gen-containing gas is metered into the distillation bottoms
25 through a gas spray.
6. A process as defined in any of claims 1 to 5, wherein an oxy-
gen-containing gas is metered in on the suction side of a
circulating pump mounted upstream of the distillation assem-
30 bly.
7. A process as defined in any of claims 1 to 6, wherein the ox-
ygen is fed in at a rate of from 0.01 to 0.5 wt%, based on
the weight of vinylaromatic monomer.
